CULTURAL DIRECTIONS

Any good garden soil is suitable for Gladioli. Plant during garden making time in your locality when there is no danger of spring frost.

Plant 3 to 5 inches deep, in rows from 14 to 24 inches apart, with 4 to 6 inches between each bulb in the row. They like plenty of air and sunshine. Therefore do not plant in shade of buildings or trees. During dry weather a thorough soaking once a week is better than daily sprinkling. If cut flowers are desired, when two blooms are open cut flowers spike slanting with a sharp knife. At least four leaves must be left on plant to make new bulbs.

Dig bulbs in fall before ground freezes. Cut ~~tops~~ off close to bulbs. Dry a few days in open air but protect at night from frost, and when dry store away for winter. Save the little bulblets, plant them the next spring like peas, two inches deep, and they will make big bulbs. Gladioli are not hardy. Do not let bulbs freeze or frost.

*We are also growing for fall planting
bulbs of Daffodils Narcissi and Tulips*
